Abnormal Screening, Physician Referral (inpatient and/or outpatient)

Coordinate next steps with ordering MD

Provide support, education and assistance in scheduling biopsy or testing

Coordinate referral to Medical Oncology/Radiation/Surgery

Positive results

Arrange for 2nd opinion

Coordinate care with tertiary facility or specialist (e.g. clinical trials, surgical specialists, bone marrow transplant)

Negative results

• Education and teaching on diagnosis and treatment plan
• Coordinate genetics counseling and testing
• Refer for fertility preservation (sperm/egg cryopreservation)
• Facilitate/participate in family meetings about care transitions (palliative, hospice)
• Collaborate with inpatient case managers on patient plans of care, inpatient consults and discharge planning
• Prepare and present Survivorship Care Plans
• Refer to Oncology Social Worker for financial assistance, ride assistance and supportive counseling
• Refer to outpatient services: home care services, physical therapy, lymphedema therapy and dietitian for assessment, counseling, meal planning, pre/post g-tube teaching
• Refer for wigs and prosthetics

Triage to:
MSW/ Psychosocial and Financial needs, FMLA, Disability, Transportation
Dietitian/ Nutritional needs
Homecare/ additional clinical support
Co-Pay Assistance Programs/ tests, medication

Abnormality > Diagnosis > Treatment > Survivorship
